

CISM™ Certification Prep Course

The Certified Information Security Manager (CISM) certification is the highest certification for security professionals who manage security teams/departments, and/or assess their enterprise's information security posture on a daily basis.

Because this certification covers a wide breadth of subjects and technologies it is recommended that individuals taking this exam prepare by taking a prep course to familiarize themselves with subject areas they may not work with on a daily basis.

The Foundstone CISM Prep Course is designed to cover all material of the CISM exam and to help identify the weak areas an individual may have so that they can concentrate their studies around those areas.

Who Should Take This Class

Security professionals, Managers of security departments, and individuals looking to enhance their career by attaining their CISM certification. The CISM certification is also part of the DoD 8570-01m requirements.

The CISM prep class is held in a instructor led lecture style. Class discussions during the lectures help reinforce topics discussed. Evening class study and question-answer forums are held to further prepare you for the exam.

Course Materials

CISM Prep Book

Duration

Five (5) Days
